**INTERNATIONAL PRELIMINARY
EXAMINATION REPORT**

International application No. PCT/GB98/02671

I. Basis of the report

1. This report has been drawn on the basis of *(substitute sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to the report since they do not contain amendments.)*:

Description, pages:

1-38 as originally filed

Claims, No.:

1-49 as originally filed

Drawings, sheets:

1/20-20/20 as originally filed

2. The amendments have resulted in the cancellation of:

- ☐ the description, pages:
☐ the claims, Nos.:
☐ the drawings, sheets:

3. ☐ This report has been established as if (some of) the amendments had not been made, since they have been considered to go beyond the disclosure as filed (Rule 70.2(c)):

4. Additional observations, if necessary:

V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Yes: Claims 1 - 49
	No: Claims
Inventive step (IS)	Yes: Claims 1 - 49
	No: Claims
Industrial applicability (IA)	Yes: Claims 1 - 49
	No: Claims

2. Citations and explanations

see separate sheet

VIII. Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

see separate sheet

Section V:

-
1. The independent claims 1, 22, 47 and 48 define methods and products, respectively, which combine the formation of polymer layers by self-assembly with the formation of other layers by other methods.

The combination of different layer formation methods results in a reduced production time for the light-emitting device but maintains the advantages inherent to the self-assembled layers.

-
2. The available prior art documents neither teach or suggest the combination of steps as claimed. The subject-matter of claims 1, 22, 47 and 48, as well as of the claims dependent thereon, is therefore novel and based on an inventive step.
 3. Treatment of a surface prior to the self-assembly step, as claimed in the independent claims 44, 45 and 46, is also not known or obvious from the prior art. Novelty and inventive step is therefore also acknowledged for these claims.

Section VIII:

1. The independent claim 44 is vague and indefinite because it merely defines a intended result (such that ...) rather than the process steps necessary to obtain this result.

Independent claim 47 is also vague and indefinite. The product-by-process form is not appropriate in this case because the product can be defined in constructive terms, as has been done in claim 48, for example.

B III TEXT OF THE ABSTRACT (Continuation of the first sheet)

Provided is a method of fabricating an organic light-emitting device, which method comprises the steps of :

forming a first electrode (4) for the device over a substrate (2) ;

either forming by self-assembly at least one polymer layer (6,8) over the first electrode (4) and forming other than by self-assembly at least one layer of organic light emissive material (10) over the at least one polymer layer (6,8) ; and forming a second electrode (12) for the device over the at least one layer of organic light emissive material (10) ;

or forming other than by self-assembly at least one layer of organic light emissive material over the first electrode and forming by self-assembly at least one polymer layer over the at least one layer of organic light emissive material ; and forming a second electrode for the device over the at least one polymer layer.

Also provided is an organic light emitting device, obtainable according to the method of the present invention.
